Rational, sober and greatVon Ing Frantisek GyarfasThere is enough space for paranoia in this world. Spread it is always popular. Greg Conti fortunately did not go this way. He simply went through all sources of information we provide to Google as a byproduct of our using different Google applications. There is no reason for panic. But ignore it could be dangerous. Everyone who is not interested just in myths should be aware of such analysis.

Kurzbeschreibung What Does Google Know about You? And Who Are They Telling? When you use Googles free services, you pay, big timewith personal information about yourself. Google is making a fortune on what it knows about youand you may be shocked by just how much Google does know. Googling Security is the first book to reveal how Googles vast information stockpiles could be used against you or your businessand what you can do to protect yourself. Unlike other books on Google hacking, this book covers information you disclose when using all of Googles top applications, not just what savvy users can retrieve via Googles search results. West Point computer science professor Greg Conti reveals the privacy implications of Gmail, Google Maps, Google Talk, Google Groups, Google Alerts, Googles new mobile applications, and more. Drawing on his own advanced security research, Conti shows how Googles databases can be used by others with bad intent, even if Google succeeds in its pledge of dont be evil. Uncover the trail of informational bread crumbs you leave when you use Google search
